Methods

AddValueChangeListenerToBoolean(string,
Action<VariableValueChangedCallbackContext<bool>>)

Declaration

```
public void AddValueChangeListenerToBoolean(string variableName, Action<VariableValueChangedCallbackCor
```

Parameters

TYPE	NAME
string	variableName
Action<VariableValueChangedCallbackContext<bool>>	callbackAction

AddValueChangedListenerToFloat(string, Action<VariableValueChangedCallbackContext<float>>)

Declaration

```
public void AddValueChangedListenerToFloat(string variableName, Action<VariableValueChangedCallbackContext<float>> callbackAction)
```

Parameters

TYPE	NAME
string	variableName
Action<VariableValueChangedCallbackContext<float>>	callbackAction

AddValueChangedListenerToInt(string, Action<VariableValueChangedCallbackContext<int>>)

Declaration

```
public void AddValueChangedListenerToInt(string variableName, Action<VariableValueChangedCallbackContext<int>> callbackAction)
```

Parameters

TYPE	NAME
string	variableName
Action<VariableValueChangedCallbackContext<int>>	callbackAction

AddValueChangedListenerToString(string, Action<VariableValueChangedCallbackContext<string>>)

Declaration

```
public void AddValueChangeListenerToString(string variableName, Action<VariableValueChangedCallbackCont
```

Parameters

TYPE	NAME
string	variableName
Action<VariableValueChangedCallbackContext<string>>	callbackAction

Clone()

Declaration

```
public VariableBank Clone()
```

Returns

TYPE
VariableBank

GetAllVariableNames()

Declaration

```
public List<string> GetAllVariableNames()
```

Returns

TYPE
List<string>

GetAllVariableNamesWithTypes()

Declaration

```
public List<string> GetAllVariableNamesWithTypes()
```

Returns

TYPE
List<string>

GetInstance(string)

Declaration

```
public static VariableBank GetInstance(string targetGuid)
```

Parameters

TYPE	NAME
string	targetGuid

Returns

TYPE
VariableBank

HasAny(string)

Declaration

```
public bool HasAny(string variableName)
```

Parameters

TYPE	NAME
string	variableName

Returns

TYPE
bool

HasBoolean(string)

Declaration

```
public bool HasBoolean(string variableName)
```

Parameters

TYPE	NAME
string	variableName

Returns

TYPE
bool

HasFloat(string)

Declaration

```
public bool HasFloat(string variableName)
```

Parameters

TYPE	NAME
string	variableName

Returns

TYPE
bool

HasInt(string)

Declaration

```
public bool HasInt(string variableName)
```

Parameters

TYPE	NAME
string	variableName

Returns

TYPE
bool

HasString(string)

Declaration

```
public bool HasString(string variableName)
```

Parameters

TYPE	NAME
string	variableName

Returns

TYPE
bool

SetBoolean(string, bool)

Declaration

```
public bool SetBoolean(string variableName, bool newValue)
```

Parameters

TYPE	NAME
string	variableName
bool	newValue

Returns

TYPE

bool

SetFloat(string, float)

Declaration

```
public bool SetFloat(string variableName, float newValue)
```

Parameters

TYPE	NAME
------	------

string	variableName
--------	--------------

float	newValue
-------	----------

Returns

TYPE

bool

SetInt(string, int)

Declaration

```
public bool SetInt(string variableName, int newValue)
```

Parameters

TYPE	NAME
------	------

string	variableName
--------	--------------

int	newValue
-----	----------

Returns

TYPE

bool

SetString(string, string)

Declaration

```
public bool SetString(string variableName, string newValue)
```

Parameters

TYPE	NAME
string	variableName
string	newValue

Returns

TYPE
bool

TryGetBoolean(string, out bool)

Declaration

```
public bool TryGetBoolean(string variableName, out bool value)
```

Parameters

TYPE	NAME
string	variableName
bool	value

Returns

TYPE
bool

TryGetFloat(string, out float)

Declaration

```
public bool TryGetFloat(string variableName, out float value)
```

Parameters

TYPE	NAME
string	variableName
float	value

Returns

TYPE
bool

TryGetInt(string, out int)

Declaration

```
public bool TryGetInt(string variableName, out int value)
```

Parameters

TYPE	NAME
string	variableName
int	value

Returns

TYPE
bool

TryGetString(string, out string)

Declaration

```
public bool TryGetString(string variableName, out string value)
```

Parameters

TYPE	NAME
string	variableName
string	value

Returns

TYPE
bool

Events

OnDestroyAction

Declaration

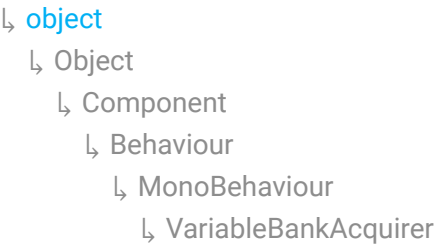

```
public event Action OnDestroyAction
```

Event Type

TYPE
Action

Class VariableBankAcquirer

Inheritance

```

Property Value

TYPE

[bool](#)

Overrides

[BaseVariableComparer.HasFixedBank](#)

Methods

Clone()

Declaration

```
public VariableComparer Clone()
```

Returns

TYPE
VariableComparer

Clone(string)

Declaration

```
public VariableComparer Clone(string overrideBankGuid)
```

Parameters

TYPE	NAME
string	overrideBankGuid

Returns

TYPE
VariableComparer

SetBankGuid(string)

Declaration

```
public void SetBankGuid(string newBankGuid)
```

Parameters

TYPE	NAME
string	newBankGuid

Class VariableSetter

Methods

Exists(string)

Declaration

```
public static bool Exists(string bankGuid)
```

Parameters

TYPE	NAME
string	bankGuid

Returns

TYPE
bool

GetBankIfExists(string)

Declaration

```
public static VariableBank GetBankIfExists(string bankGuid)
```

Parameters

TYPE	NAME
string	bankGuid

Returns

TYPE
VariableBank

GetBankNameList()

Declaration

```
public static List<string> GetBankNameList()
```

Returns

TYPE
List<string>

GetIndexOf(string)

Declaration

```
public static int GetIndexOf(string bankGuid)
```

Parameters

TYPE	NAME
string	bankGuid

Returns

TYPE
int

NameToGuid(string)

Declaration

```
public static string NameToGuid(string bankName)
```

Parameters

TYPE	NAME
string	bankName

Returns

Namespace: [com.absence.variablebanks.editor](#)

Assembly: Assembly-CSharp-Editor-firstpass.dll

Syntax

```
[CustomPropertyDrawer(typeof(VariableBankReference), true)]  
public class VariableBankReferencePropertyDrawer : PropertyDrawer
```

Methods

GetPropertyHeight(SerializedProperty, GUIContent)

Override this method to specify how tall the GUI for this field is in pixels.

Declaration

```
public override float GetPropertyHeight(SerializedProperty property, GUIContent label)
```

Parameters

TYPE	NAME	DESCRIPTION
SerializedProperty	<code>property</code>	The SerializedProperty to make the custom GUI for.
GUIContent	<code>label</code>	The label of this property.

Returns

TYPE	DESCRIPTION
<code>float</code>	The height in pixels.

Overrides

UnityEditor.PropertyDrawer.GetPropertyHeight(UnityEditor.SerializedProperty, UnityEngine.GUIContent)

OnGUI(Rect, SerializedProperty, GUIContent)

Override this method to make your own IMGUI based GUI for the property.

Declaration

```
public override void OnGUI(Rect position, SerializedProperty property, GUIContent label)
```

Parameters

TYPE	NAME	DESCRIPTION
Rect	<code>position</code>	Rectangle on the screen to use for the property GUI.
SerializedProperty	<code>property</code>	The SerializedProperty to make the custom GUI for.
GUIContent	<code>label</code>	The label of this property.

Overrides

UnityEditor.PropertyDrawer.OnGUI(UnityEngine.Rect, UnityEditor.SerializedProperty, UnityEngine.GUIContent)

Class VariableComparerDrawer

Inheritance

↳ [object](#)
↳ GUIDrawer
↳ PropertyDrawer
↳ VariableComparerDrawer

Inherited Members

PropertyDrawer.CanCacheInspectorGUI(SerializedProperty)

PropertyDrawer.attribute

PropertyDrawer.fieldInfo

PropertyDrawer.preferredLabel

Namespace: [com.absence.variablebanks.editor](#)

public class VariableComparerDrawer : PropertyDrawer
```

Fields

StyleSheetPath

Declaration

```
protected static readonly string StyleSheetPath
```

Field Value

TYPE

[string](#)

Methods

CreatePropertyGUI(SerializedProperty)

Override this method to make your own UI Toolkit based GUI for the property.

Declaration

```
public override VisualElement CreatePropertyGUI(SerializedProperty property)
```

Parameters

TYPE	NAME	DESCRIPTION
SerializedProperty	property	The SerializedProperty to make the custom GUI for.

Returns

TYPE	DESCRIPTION
VisualElement	The element containing the custom GUI.

Overrides

UnityEditor.PropertyDrawer.CreatePropertyGUI(UnityEditor.SerializedProperty)

DrawGUI(VisualElement, SerializedProperty)

Declaration

```
protected virtual VisualElement DrawGUI(VisualElement container, SerializedProperty property)
```

Parameters

TYPE	NAME
VisualElement	container
SerializedProperty	property

Returns

TYPE
VisualElement

GetPropertyHeight(SerializedProperty, GUIContent)

Override this method to specify how tall the GUI for this field is in pixels.

Declaration

```
public override float GetPropertyHeight(SerializedProperty property, GUIContent label)
```

Parameters

TYPE	NAME	DESCRIPTION
SerializedProperty	property	The SerializedProperty to make the custom GUI for.
GUIContent	label	The label of this property.

Returns

TYPE	DESCRIPTION
float	The height in pixels.

Overrides

UnityEditor.PropertyDrawer.GetPropertyHeight(UnityEditor.SerializedProperty, UnityEngine.GUIContent)

OnGUI(Rect, SerializedProperty, GUIContent)

Override this method to make your own ImGui based GUI for the property.

Declaration

```
public override void OnGUI(Rect position, SerializedProperty property, GUIContent label)
```

Parameters

TYPE	NAME	DESCRIPTION
Rect	position	Rectangle on the screen to use for the property GUI.
SerializedProperty	property	The SerializedProperty to make the custom GUI for.
GUIContent	label	The label of this property.

Overrides

UnityEditor.PropertyDrawer.OnGUI(UnityEngine.Rect, UnityEditor.SerializedProperty, UnityEngine.GUIContent)

Class VariableSetterDrawer

Inheritance

public class VariableSetterDrawer : PropertyDrawer
```

Fields

StyleSheetPath

Declaration

```
protected static readonly string StyleSheetPath
```

Field Value

TYPE

[string](#)

Methods

CreatePropertyGUI(SerializedProperty)

Override this method to make your own UI Toolkit based GUI for the property.

Declaration

```
public override VisualElement CreatePropertyGUI(SerializedProperty property)
```

Parameters

TYPE	NAME	DESCRIPTION
SerializedProperty	property	The SerializedProperty to make the custom GUI for.

Returns

TYPE	DESCRIPTION
VisualElement	The element containing the custom GUI.

Overrides

UnityEditor.PropertyDrawer.CreatePropertyGUI(UnityEditor.SerializedProperty)

GetPropertyHeight(SerializedProperty, GUIContent)

Override this method to specify how tall the GUI for this field is in pixels.

Declaration

```
public override float GetPropertyHeight(SerializedProperty property, GUIContent label)
```

Parameters

TYPE	NAME	DESCRIPTION
SerializedProperty	property	The SerializedProperty to make the custom GUI for.
GUIContent	label	The label of this property.

Returns

TYPE	DESCRIPTION
float	The height in pixels.

Overrides

UnityEditor.PropertyDrawer.GetPropertyHeight(UnityEditor.SerializedProperty, UnityEngine.GUIContent)

OnGUI(Rect, SerializedProperty, GUIContent)

Override this method to make your own ImGui based GUI for the property.

Declaration

```
public override void OnGUI(Rect position, SerializedProperty property, GUIContent label)
```

Parameters

TYPE	NAME	DESCRIPTION
Rect	position	Rectangle on the screen to use for the property GUI.
SerializedProperty	property	The SerializedProperty to make the custom GUI for.
GUIContent	label	The label of this property.

Overrides

UnityEditor.PropertyDrawer.OnGUI(UnityEngine.Rect, UnityEditor.SerializedProperty, UnityEngine.GUIContent)

↳ VariableBanksCloningHandler

Namespace: [com.absence.variablebanks.internals](#)

Assembly: Assembly-CSharp-firstpass.dll

Syntax

```
public static class VariableBanksCloningHandler
```

Properties

CloningCompleted

Declaration

```
public static bool CloningCompleted { get; }
```

Property Value

TYPE

[bool](#)

Methods

AddCloningCompleteCallbackOrInvoke(Action)

Declaration

```
public static bool AddCloningCompleteCallbackOrInvoke(Action callbackContext)
```

Parameters

TYPE	NAME
Action	callbackContext

Returns

TYPE
bool

Events

OnCloningCompleted

Declaration

```
public static event Action OnCloningCompleted
```

Event Type

TYPE
Action

Namespace `com.absence.variablebanks.testing`

Classes

[Varcaster](#)

Class Varcaster

Inheritance

Namespace: [com.absence.variablebanks.testing](#)

Assembly: Assembly-CSharp-firstpass.dll

Syntax

```
public class Varcaster : MonoBehaviour
```
